The 2006 Editors' Choice Awards honor ATERAS with Platinum Migration Award

Throughout the year, in *SQL Server Magazine's* New Products section, Vendor Briefs, Buyer's Guides, Market Watch features, and product reviews, we put you in touch with vendors who provide database products and services. This year, we took a look at the products we've covered and realized that a few of these vendors and products truly stand out. To recognize these exceptional vendors, the editors and writers of *SQL Server Magazine* created the first annual Editors' Choice Awards.

To conduct the Editors' Choice Awards, we first divided the products we've covered since January 2005 into 16 product categories. Then, the editors and writers of *SQL Server Magazine* chose platinum and gold winners in each category based on the product's strategic importance to the market, its competitive advantages, and value to the customer. These vendors produce superior products that solve specific database problems, make your businesses more productive, save you money, help you grow your company and look to the future—and might even help you go home earlier.

Migration

ATERAS DB-Shuttle™ .NET

The platinum Migration tools winner is DB-Shuttle™ .NET from ATERAS (formerly Sophisticated Business Systems). DB-Shuttle™ .NET analyzes the mainframe environment and its applications; automates the conversion of databases, applications, and languages; and assures the integrity and completeness of the converted data. The product can then tune the new environment for optimal performance. Older applications are

converted to new languages such as Microsoft VB.NET 2005 and C# 2005. When a migration to the .NET Framework is complete, the client has the functional equivalent of the legacy application.

ATERAS DB-Shuttle™ .NET Solution
